Electrical Specification: 2pcs 18650 Battery 3.7V @
3500mAh Operating Voltage: 3.7V Operating Current Stand
by : <100mA Normal Operating Current: 300-250mA Pulse
Current: 2000mA @4-2ms

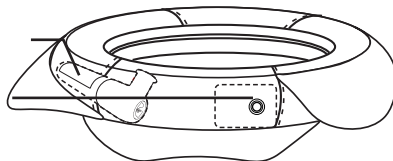

- Basic structure

Airbag area

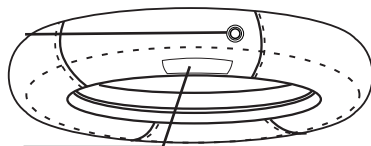

Air cylinder module

Chip motherboard

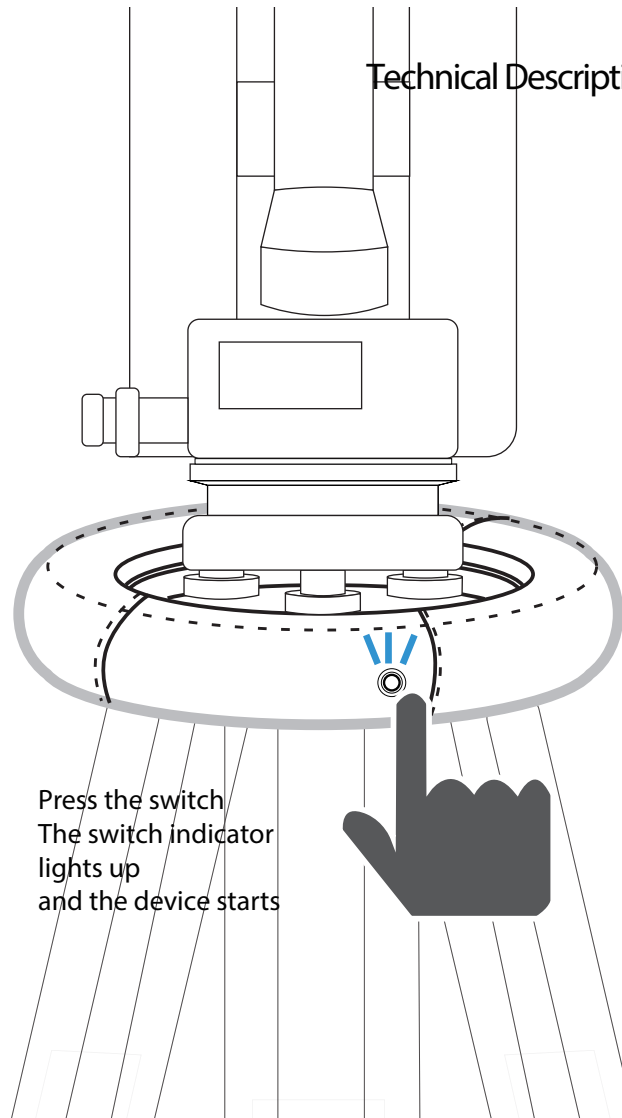

Switch, indicator light

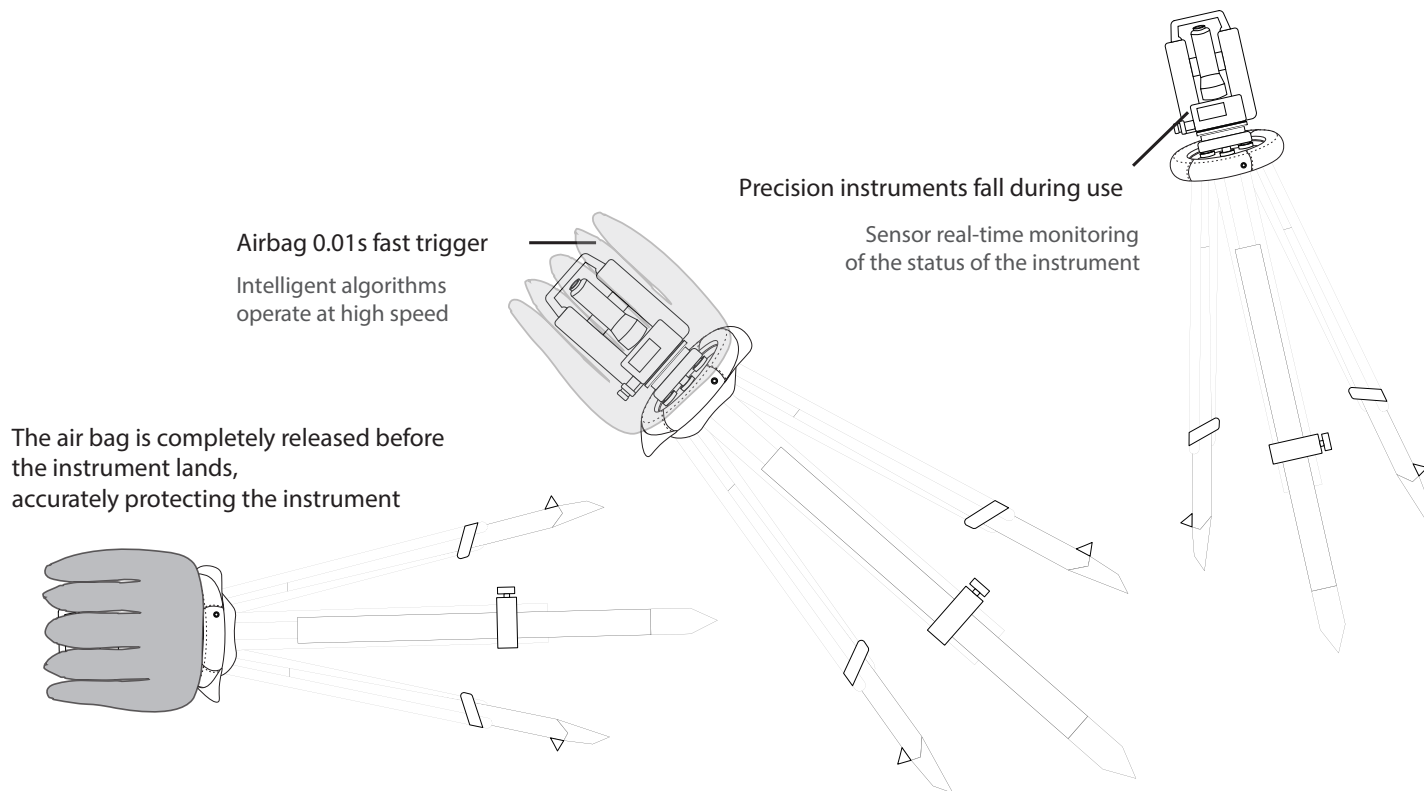

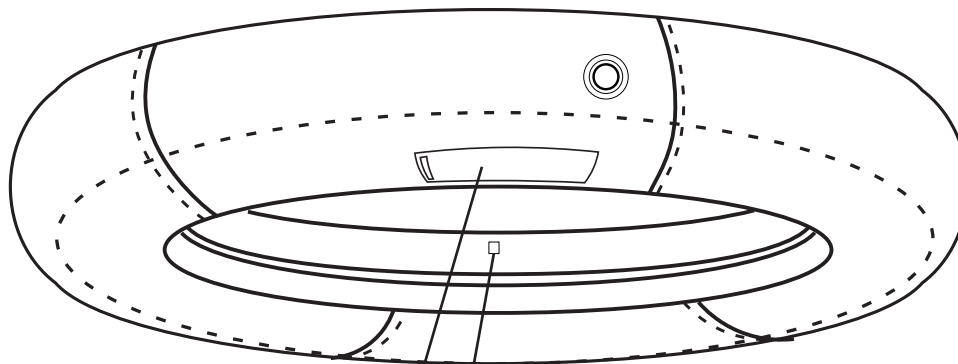

Battery : 2pcs
18650 Battery 3.7 V
@3500mAh

Technical Description 2

Press the switch
The switch indicator
lights up
and the device starts

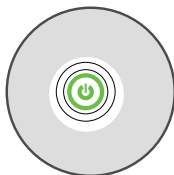

*Battery compartment
Battery : 2pcs 18650
Battery 3.7 V @ 3500 mAh

*Detection sensor:
Detect whether the device is mounted on a tripod sensor,
only after the installation of the tripod,
the device can work properly

Indicator Light Description :

Green Light is always on:

Normal operation of the equipment, the Power is Sufficient

Sicher Error Codes

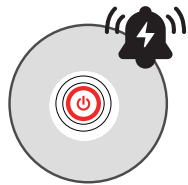

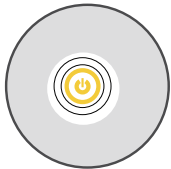

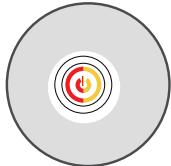

Trigger/Gas
Interlock Error
Battery Low
Sensor/System Error
